# Plus 150 Halogen Performance Globes

With the increasing market for LED Globes performance halogen globes are still the best upgrade option for putting more light on the road.

The upgraded Plus 150 globes deliver a remarkable 150% higher light volume compared to a standard globe. The longer beam penetration provides extra forward visibility of up to 60 metres, while the whiter light output can considerably reduce driver eye fatigue and improves safety by increasing overall road visibility. The results in the safest performance of any globe in the Narva range

Now with increased life of up to 40% resulting in a life reduction vs standard globes of less than 25%. This results in the markets longest lasting +150% globe.

Narva Plus 150 globes are ideal for a wide variety of applications including families, people in outer suburbs but with the extra life they are also ideal for people who do long night commuting, commercial drivers and other rural applications.
