## WIRING INSTRUCTIONS

**Green:** Indicator (+)

**Brown:** Park (+)

**Red:** Trigger (+) optional, see below. Trim and insulate if not used.

*Special electronics allow the Model 50 L.E.D lamp to be used in conjunction with your vehicle's original indicators whilst maintaining full globe outage for ADR 13/00 compliance.*

**See over page for full wiring diagram.**

**Note:** the lamp is fitted with an OE style plug. If plug is not needed simply cut off and strip wires for alternate connection.

## **WIRING DIAGRAM** – When used in conjunction with vehicle's original indicator only

1. Cut vehicle's original indicator (+) wire at a convenient location
2. Connect lamp's red (+) trigger wire to indicator end of the cut wire
3. Connect lamp's green (+) wire to vehicle loom end of the cut wire
4. Connect lamp's white (-) wire to vehicle ground
5. Connect lamp's brown (+) wire to vehicle park circuit
6. Secure any loose ends safely to prevent short circuits

*In this configuration, the Model 50 lamp controls both itself and the vehicle's original indicator. Should either the original indicator bulb or the Model 50 lamp fail, the vehicle's globe outage warning will activate. This ensures full compliance with the globe outage requirements of ADR 13/00.*
