

NON-MIGRATORY PVC CABLES

PRODUCT UPDATE - AS/NZS 3001.2:2022

Narva has a long-standing history of manufacturing Non-Migratory PVC cables for the automotive sector. Our existing range of Non-Migratory bulk cables continues to meet the updated requirements of AS/NZS 3001.2:2022.

In standard PVC cable insulation and sheathing, plasticisers are not permanently bonded to the PVC material. When these cables come into contact with expanded polystyrene (EPS), the plasticisers may migrate due to their chemical interaction.

However, Narva's cables have always been made with advanced Non-Migratory High-Performance (HP) PVC compounds, ensuring superior performance and compliance in such scenarios.

ADVANTAGES OF NARVA'S HP NON-MIG PVC COMPOUNDS:

- Medical-grade plasticisers with no phthalates
- Extremely low volatility for enhanced stability
- Non-migratory properties, ideal for use in environments where cables may contact EPS

NARVA CABLE RANGES:

- Single Core
- Multi Core
- Battery & Starter Cable
